

COMPOSITION COMPRISING A BLOCKED POLYISOCYANATE

ABSTRACT OF THE DISCLOSURE

Use of a compound according to one of the formulae I to III

I

II

III

in which

R<sup>1</sup> to R<sup>4</sup> stand independently of one another for hydrogen or for an alkyl radical having 1 to 25 carbon atoms or, in combination of two or three or four of the radicals R<sup>1</sup> to R<sup>4</sup>, for an aliphatic ring system having 1 to 25 carbon atoms, where in the case of the formula I R<sup>2</sup> and R<sup>3</sup> taken together or R<sup>3</sup> and R<sup>4</sup> taken together may also denote a substituted or unsubstituted (preferably unsubstituted) benzene ring which is fused onto the pyrazole ring for stabilizing blocked polyisocyanates against thermal yellowing. The present invention further relates to compositions comprising blocked polyisocyanates and at least one compound according to formula I to III, to coating materials comprising this composition, and also to coatings and substrates containing these coating materials.
